OBJECT ORIENTED PROGRAMMING LAB

ASSIGNMENT-10

(Topics – Standard Template Library (STL))

Programming Questions

1. **Using a vector**- Write a C++ program using vector to store five integers, display all elements, and calculate their sum.

2. **Using a List**- Write a program using list to insert elements at the beginning and end, remove an element, and display the list.

3. **Sorting and searching**- Store integers in a vector. Use the STL sort() algorithm to sort them and binary_search() to search for a given value.

4. **Using stack and Queue**- Write a program to demonstrate the operations push(), pop(), and top() using stack, and push(), pop(), and front() using queue.

5. **Using Map**- Create a map to store student roll numbers and names. Allow the user to insert student records, search by roll number, and display all records.
