OBJECT ORIENTED PROGRAMMING LAB

ASSIGNMENT-8

(Topics – Exception Handling)

Programming Questions

1. Write a C++ program to divide two numbers. If the denominator is zero, throw an exception and handle it using try and catch.

2. Write a program to input a person's age. Throw an exception if the age is negative and display an appropriate error message.

3. Write a program that accepts an integer and throws different exceptions if the number is negative or greater than 100. Handle both exceptions separately.

4. Write a program to access an element of an array. Throw and handle an exception if the entered index is outside the valid range.

5. Create a class LibraryAccount with a data member availableBooks and a function issueBook(). Throw an exception if the withdrawal amount exceeds the available balance.

6. Create a class Student that accepts marks in five subjects. Throw exceptions if any mark is outside the range 0–100. Handle invalid input and display the average only when all marks are valid.
